(54) ELECTRONIC MAIL TERMINAL, ELECTRONIC MAIL SYSTEM AND INFORMATION PROCESSING SYSTEM

(57) Abstract:

PROBLEM TO BE SOLVED: To facilitate the generation of a mail that has a higher function and to reduce a receiver's labor to write response by automatically generating response information by using receiving information and preparing an application that meets the types of mails in a mail program.

SOLUTION: A mail receiving means 2 receives a mail, a mail information managing means 6 manages a received mail and a mail preserving means 4 preserves the mail. A mail selecting means 7 is used by a user when he selects a mail, and a mail helper program selecting means 9 selects a mail helper program that is uses for mail generation. A mail header generating means 8 generates data that is contained in header data when a mail is assembled. A mail assembling means 5 assembles the mail header that is generated together with header data by the mail header program and the mail data and generates a mail. A mail sending means 3 sends assembled mail.
